

ST. LUCIE RIVER WATERSHED PROTECTION PLAN

SWC (Sandra Walters Consultants, Inc.) was part of the team that prepared the St. Lucie River Watershed Protection Plan to protect and restore surface water resources in the St. Lucie River Watershed and estuary by addressing not only water quality but also quantity, timing and distribution of water to the natural system.

SWC responsibilities included:

- ❖ research and organization of information on existing and planned water quality and water quantity projects within the study area,
- ❖ organization of water quality and quantity data into tabular formats for the different alternative plans,
- ❖ preparation of chapter sections and assisting in technical editing and review of chapter sections of the draft protection plan,
- ❖ participation in progress meetings with local government and agency officials, and writing detailed meeting minutes for the administrative record,
- ❖ assistance in meetings to inform the public of project details and organization of public comments and other meeting materials, and
- ❖ incorporation of comments from reviewing agencies and the public into appropriate chapter sections.
